

# Commissioning

## Quality assurance with optimised energy performance

Knowing you have delivered the design vision and met the needs of your client is the true marker of installation success. So why take risks? Our commissioning service is the ultimate quality, comfort and compliance guarantor, but it also goes further.

### Optimise your system for significant future savings

Meet your carbon reduction ambitions through features like daylight saving and occupancy timers.

### Get the perfect set-up for your end user

Maximising the flexibility of their space as well as ensuring visual comfort and wellbeing through things like circadian rhythm programming. Vital if you are looking to achieve recognised building accreditations like BREEAM and WELL.

### Emergency compliance testing and reporting

Peace of mind that you're handing over a fault-free, fully tested system.

### Optimised Performance & Compliance

Tailored programming to meet specifications, ensuring automation for energy efficiency and compliance with BS5266 reporting.

### Seamless System Integration

Full device identification, grouping, zoning, IP setup, and BACnet or third-party integration support.

### Expert On-Site Programming & Commissioning

Direct access to an engineer for system setup, including time delays, daylight dimming, scenes, and tuneable white lighting.

### IT & Network Support

Assistance with setting up controllers, head-end graphics, communication protocols, and bringing networked systems online.

### Comprehensive Testing & Fault Diagnosis

Snagging support for fault finding, diagnostics, and warranty-related installation corrections.

### Training & Handover

Hands-on demonstration for installers, FM teams, or end users, ensuring full system understanding and future-proofing.

### Enhanced Digital & Remote Support

Access to telephone and digital technical support for ongoing troubleshooting and issue resolution.

### System Documentation & Backup

Address plans, site report drawings, access rights management, and data backups for long-term system reliability.
