

Command application

As services within a modern efficient building become more intelligent so does the complexity of the wiring installation, particularly regarding the lighting, lighting control and emergency lighting central test systems.

At Whitecroft Lighting we can offer a professional design service to minimise errors during the design and installation of the lighting and controls systems.

The Command Fast Link range of plug and play components reduces the risk to the installation when combined with the Whitecroft Command Application Design Service. The risk to the installation and operation of lighting and controls system is reduced to a minimum, resulting in a building that immediately meets operational requirements.

The Whitecroft Lighting team can deliver:

- Pre-installation site visits to include toolbox talks with operatives
- Individual room installation schematic drawings using the latest AutoCAD software
- Building wide installation schematic drawings for Command Plus and Command Elite systems detailing grouping, zoning and switching information
- Onsite commissioning by trained engineers of lighting, controls and emergency lighting control devices supplied by Whitecroft Lighting
- Onsite training on lighting, controls and emergency lighting control systems supplied by Whitecroft Lighting.

For further details please ask you Whitecroft sales representative or contact the Whitecroft sales office.
