

Lighting Controls offer the single biggest opportunity for saving energy in any lighting project. When it comes to choosing the right control system, there are several factors that influence the decision making process. Our lighting controls experts will guide you through this process to ensure that you specify the most suitable system for your needs.

We offer three levels of controls systems, each with differing levels of functionality. These are:

Command Elite

A fully addressable DALI control system, offering you the ability to control individual luminaires and detectors, configure and re-configure groups and create interacting groups of luminaires. This allows complete lighting management and reporting, along with integration into other elements of a building management system.

Command Plus

A lighting control system based upon simple switching and/or broadcast DALI control system, with flexible configuration options and the ability to control, link and reconfigure groups of luminaires.

Command

Stand-alone switching and/or dimming detectors/photocells, allowing a group of luminaires to be created and controlled by a single detector.
