

duo[®] colour

Adding Drama

Duo can be used for more than functional lighting. It is available with built-in LED elements which can be used to create a number of dramatic effects.

For any prestigious project, the building's night-time appearance is an important factor. Until now this has been achieved with external luminaires which are both costly to install and run. Duo can incorporate coloured LED elements which can be used to 'floodlight' the building from inside creating a dramatic visual statement.

The LED element is contained within the body of the luminaire and consumes only 9W of power, giving the designer the opportunity to significantly reduce energy consumption when compared to a conventional floodlighting scheme.

Duo Colour can be used for a number of applications as well as building floodlighting. Reception areas can be illuminated in corporate colours, whilst using Duo Colour in stairwells and lift lobbies could aid navigation or enhance architectural features.

ORDER CODES

Duo Colour

LED Kit Blue	Add suffix /LB to order code	i.e.DUOSH414PXT/ LB
LED Kit Red	Add suffix /LR to order code	i.e.DUOSH414PXT/ LR
LED Kit Green	Add suffix /LG to order code	i.e.DUOSH414PXT/ LG
