

PowerPlan™

MOTIVATION

PowerPlan™ is a sophisticated design tool that gives us a further dimension to our ability to provide solutions for any application. It also extends the service we can provide to our clients not only to secure the optimum solution in terms of aesthetics and performance for a lighting scheme, but also to present the data to become an integrated part of any presentation of the overall project.

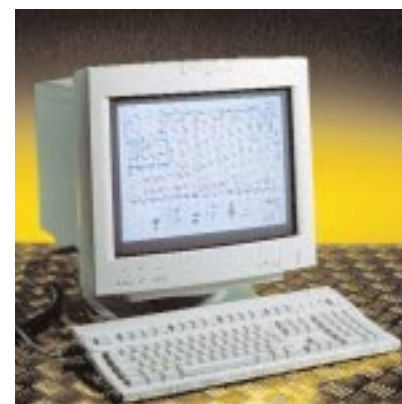

Sophisticated graphics complement detailed calculations to provide documents that are not only technically thorough and accurate, but also visually stimulating.
