

Command 3 Concept

MOTIVATION

The Command 3 intelligent control system automatically adjusts to changes in the environment – by detecting absence and presence, compensating for ageing lamps and luminaires, and even adjusting to allow for the change in daylight.

The Command 3 intelligent eye can be factory fitted to the majority of luminaires in the commercial section. An optional hand held controller allows individual control.

To specify simply add the suffix in the table below to the relevant product codes.

For further information about Command 3 see page 126 in our Lighting Management section.

Hand held controller
