

Marks & Spencer

MOTIVATION

The lighting specification for the Marks & Spencer store at Braehead near Glasgow, required a fresh approach to be integrated into a modified store concept.

Working closely with the in-house engineering team a direct/indirect 1200mm square fully recessed fluorescent luminaire was developed. High levels of illumination were achieved to create a spacious, customer friendly and productive selling environment. The customised luminaires are supplemented by further lighting products from the Whitecroft range.

Custom designed luminaire
